## DETAILED ACTION

### *Response to Arguments*

Applicant's arguments with respect to claims 1-12 and 19-29 have been considered but are moot in view of the new ground(s) of rejection.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 and 19-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schein (US 6002394) in view of Kostreski et al (US 5734589).

Regarding claim 1, Schein discloses a computer system for managing favorite channels (Fig.1) based on a user specified theme (Col.10, lines 40-Col.11, lines 45), the computerized system comprising:

One or more favorite channel lists (Col.10, lines 40-60 and Fig. 5);

Storing one or more favorite channel lists (Col.10, lines 55-60);

A favorites database for storing one or more favorite channel lists (Fig.5-9;

Col.10, lines 40-45, Col.16, lines 15-42 and Col.18, lines 52-61)

Schein does not clearly disclose one or more logical channels of the favorite channel list related to user specified theme.

Kostreski shows one or more logical channel (Fig.5 and Col.28, lines 40-Col.29, lines 34). The secondary program maps 520a and 520b both provide the same RF and PID values for CBS, ABC, NBC and FOX; therefore, Kostreski discloses an arrangement that enables VIPs to share sources within the reserved section 522 (Col.29, lines 14-29 and Col.29, lines 35-Col.30, lines33). Furthermore, Kostreski teaches each logical channel "SEL." uniquely identifies a corresponding physical channel "VIP StarSight "for popular network such as CBS, ABC, NBC and FOX regardless the user select "VIP StarSight" or "VIP BVS"

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Schein by mapping favorite channel listed to corresponding logical (virtual) channels, as taught by Kostreski, in order to present to user an list of programs (EPG) in an organized, structured format adapted for ease of use by the user as suggested by Kostreski (Col.3, lines 15-57).

Regarding claim 2, Schein further discloses an EPG (Fig.16A) content database storing a plurality of events available on one or more channels for a period of time (Col.21, lines 33-52).

Regarding claim 3, Schein further discloses wherein the user specified theme corresponds to a theme field of events in an EPG content database (Col.14, lines 60-65+ and Col.11, lines 13-45).

Regarding claim 4, Schein further discloses an EPG data services for managing the EPG content Database, the EPG data services providing functions for loading EPG

–type (category) data from one or more data services (different program sources)  
(Col.6, lines 13-Col.7, lines 43)

Regarding claim 5, Scheinr further discloses a favorites service providing one or more user interfaces and a plurality of management functions for each one of the favorite channel list (Fig., 5 and Col.10-60).

Regarding claim 6, Schein further discloses wherein the management functions include at least one function selected from the group of functions consisting of: adding a favorite event to one of the favorite channel lists (Fig.21B), and selecting a favorite event from one of the favorite channel lists (Col.14, lines 53-Col.15, lines 5).

Schein does not clearly disclose removing a favorite event from one of the favorite channel lists.

Official Notice is taken, the updating a relational database such as adding or removing a specific record within a database is well known in the art. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Schein by having a function of removing a favorite event from one of the favorite channel lists so that the user could update the favorite according to their choice.

Regarding claim 7, Kostreski further discloses a channel map service for determining a physical channel number and a corresponding physical device for each one of the logical channels (Fig.5)

Regarding claim 8, see analysis of claim 1, in combination with claims 5-7.

Regarding claim 9, see analysis of claim 7.

Regarding claim 10, see analysis of claim 6.

Art Unit: 2611

Regarding claim 11, see analysis of claim 1.

Regarding claim 12, see analysis of claim 2.

Regarding claim 19, see analysis of claim 1 in combination with claim 3.

Regarding claims 20 and 21, see analysis of claim 3.

Regarding claim 22 and 28, see analysis of claim 2.

Regarding claims 23 and 29, Schein further discloses the step of identifying is achieved by matching one or more words in an event description from the EPG content Database to the user specific theme (Col.14, lines 53-40, Col.16, lines 15-36).

Regarding claim 24, Schein further discloses a computer (motherboard, processor, RAM, etc...Fig.1, 2, 3) comprising:

A processor (Col.4, lines 55-65);

A computer readable medium (Fig.1, Col.4, lines 57-60);

A plurality of computer instructions (Col.5, lines 1-15) executed from the computer readable medium by the processor for performing the step of identifying one or more channels showing an event of a user specified theme and including each one of the channels in the favorite channel list (Col.4, lines 53-Col.6, lines 10).

Regarding claim 25, see analysis of claim 1-6.

Regarding claims 26 and 27, see analysis of claim 3.

Art Unit: 2611

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schein et al. (US 6002394) shows systems and methods for linking television viewers with advertisers and broadcasters.

Strubbe et al. (EP 0 572 090 A2) shows a system and method for automatically correlating user preferences with a TV program information database.
